Chapter 1

Introduction

Welcome to the standard layout for your IDEA LEAGUE MSc thesis written in $\text{\LaTeX}$. $\text{\LaTeX}$ has a variety of advantages over conventional/ standard text editing programs, which you will soon enough discover yourself. $\text{\LaTeX}$ almost forms a standard in the Scientific Community, especially due to its effective and straightforward mathematical capabilities. This is Chapter ???. If you want to know more about $\text{\LaTeX}$ you better read [?] or use the extensive help available on the internet. . This 'hidden' index command helps you making an index at the end of your thesis. You can add this flag anywhere you want to make an index hit. You can see here also how to use acronyms, like **DUT!** (**DUT!**). The acronyms are automatically listed in the corresponding section. Also, hyperlinks are created automatically with the developed class file, such that your digital PDF version of your thesis can be read dynamically. Have fun with $\text{\LaTeX}$ and your M.Sc. research project and good luck!

The purpose of the introduction is to tell readers why they should want to read what follows the introduction. This chapter should provide sufficient background information to allow readers to understand the context and significance of the problem. This does not mean, however, that authors should use the introduction to rederive established results or to indulge in other needless repetition. The introduction should (1) present the nature and scope of the problem; (2) review the pertinent literature, within reason; (3) state the objectives; (4) describe the method of investigation; and (5) describe the principal results of the investigation.

Part I

First Part

Chapter 2

First Real Chapter

This is a demonstration chapter. I will explain some of the possibilities of L^AT_EX. Here something will be shown of control theory, 'the transfer function' $H(s)$. Subscripts and superscripts can be put in the nomenclature list. Other things can also be added to the nomenclature list, like explanations of symbols being used throughout the thesis.

2-1 First section

This is the section. Referring to equations, figures and tables can easily be done by the commands `\eqnref{}`, `\figref{}` and `\tabref{}`.

$$H(s) = \frac{1}{s+2} \quad (2-1)$$

You see? Refer to equations like this Eq. (??), i.e. the name of the label you have given the specific equation, figure or table.

2-1-1 The first subsection

Now I demonstrate, numbering equations, using subequations:

$$\nabla \times \mathbf{L} = \frac{\partial \mathbf{G}}{\partial t} \quad (2-2a)$$

$$\nabla \times \mathbf{G} = \frac{\partial \mathbf{L}}{\partial t} + \mathbf{J} \quad (2-2b)$$

$$\mathbf{G} = \sigma \mathbf{J} \quad (2-2c)$$

Or we can make matrices:

$$\mathbf{Q}_{12} = \begin{bmatrix} 0 & 1 & 0 \\ 1 & 0 & 1 \\ 0 & 1 & 0 \end{bmatrix}$$

This can also be done using the `\align{}` command. Equation arrays are also possible:

$$\nabla \times \mathbf{L} = \frac{\partial \mathbf{G}}{\partial t} \quad (2-3)$$

$$\nabla \times \mathbf{G} = \frac{\partial \mathbf{L}}{\partial t} + \mathbf{J} \quad (2-4)$$

$$\mathbf{G} = \sigma \mathbf{J} \quad (2-5)$$

The first sub-subsection with a very very very long title, but in the table of contents one can only see the short title in square brackets

Impressed by the capabilities? If you want to know more about the capabilities of $\text{\LaTeX}$, take a look at the "The Not So Short Introduction to $\text{\LaTeX} 2_{\epsilon}$ ", which can be found on the internet.

Figure 2-1: Stability conditions for the vertical stability of saturated and unsaturated air.

Next paragraph. .

And finally I end this example file with a table which will be centered in the middle of the following page

<i>Data files listed in a table</i>	
First part	
Fabracadabra.m	- Saturation computation
Fobracadabra.m	- Pressure computation
Fibricadibri.m	- Permeability computation
Structural rock model	
struct.m	- Rock structural data using symmetric boundary condition
bstruct.m	- Rock structural data using anti-symmetric boundary condition

Table 2-1: Good-looking program data deck files.

Appendix A

The back of the thesis

A-1 An appendix section

A-1-1 An appendix subsection with C++ Lisitng

A-1-2 A Matlab Listing

Appendix B

Yet another appendix

B-1 Another test section

Ok, all is well.
